# Intertech Flooring & Your Health Care Facility

Today's hospitals, medical offices and assisted living facilities have moved away from the stark institutional designs of the past. In their place, today's health care facilities incorporate soothing color schemes and designs that do everything from enhancing the concentration of surgeons in operating suites, to encouraging patient rest and recovery. At the same time, flooring products used in these facilities must meet stringent infection control requirements and stand up to heavy traffic.

At Intertech Flooring, we've been helping central Texas health care facilities create warm, friendly, durable and safe environments since 1988. We understand the unique demands of the health care industry, and we have extensive experience in delivering the best flooring solutions to meet your needs.

### The Intertech Difference.

- **We Meet the Environmental Test.** From seamless flooring that withstands fluid penetration, to installation procedures that minimize fumes and dust, we are experienced in meeting hospitals' strict environmental requirements. To eliminate the possibility of hidden contaminants seeping under or behind flooring material, we install homogeneous sheet flooring with heat-welded seams and flash coving (running the same material up the vertical surfaces to allow for ease of maintenance). In installations where air quality is critical, we can use carpet with mill-applied or low VOC adhesives and products that are green label-certified.

And when it comes to asbestos removal, our experienced team uses the latest in approved work practices by OSHA and the Texas Department of Health to remove vinyl asbestos tile (VAT) without requiring full abatement - saving you money and avoiding facility downtime.

- **We Minimize Interruption.** Health care is an around-the-clock business ... and that means we must be too. Our project managers are experts at staging projects to minimize the impact to staff, patients and visitors. We work with you to determine a time line that gets the job done as quickly as possible, with the least disruption to your organization.
- **We Offer Expert Advice.** Health care facilities combine many different environments - from business offices and operating rooms, to high-tech computer installations and food service areas. Our experienced staff includes specialists in all these areas, bringing unmatched flooring expertise to each health care project. Our team is experienced in assessing unique site conditions such as excessive moisture in concrete to determine the right solution for your facility. From hallway carpeting that accommodates roller traffic, to hard surface flooring in sterile labs, our specialists can help you make the best selections to meet your needs.
- **We Use a Team You Can Trust.** Hospitals present unique security challenges, from protecting patient safety and privacy to securing medications and supplies. Many commercial flooring companies use outside laborers with unknown backgrounds and skills for their installation work. Not Intertech. We rely solely on in-house installers, who pass rigorous employment screenings and wear identification badges at all times. The reputation of our in-house installers is one of the factors that sets Intertech Flooring apart from the rest — and keeps our clients returning job after job.

### Partner with the Experts.
